Committed to Aotearoa New Zealand

TRUSTED

Since 1984

Water quality is front of mind for many New Zealanders, from the quality of drinking water in homes, through to the health of waterways in all environments.

From listening to the needs of our clients and with our ongoing involvement in many nationwide sector and industry groups, we have developed a range of tailored water testing offerings that allow our services to be easily utilised by all.

Hill Labs is
New Zealand's
largest water testing
laboratory with an
extensive range of
water tests available.

Using the very latest technology our water testing suites have been designed to meet the requirements of your specific situation and includes chemistry and microbiological tests. Over 40 years we've gained valuable knowledge and experience in water testing, so you can have total confidence in the quality of our test results. We've accumulated a wealth of data specific to New Zealand, ensuring your results are both accurate and relevant. During that time, we've also stayed NZ owned and operated, and fully independent. We're proud to be trusted as a leading testing laboratory for many New Zealand councils.

■ **AGRICULTURAL WATER TESTING**

The quality of your water can have a major impact on the performance of your crops and overall health of your herds. We offer a variety of agricultural water tests so that all of your on-farm needs can be met by a single supplier. This includes Irrigation Water, Livestock Drinking Water, Dairy Shed Water, Global GAP Water and Farm Surface Water Quality testing options.

■ DRINKING WATER TESTING

Drinking water quality will vary greatly depending on the source. It is always advisable to check whether your drinking water meets the requirements of the New Zealand Drinking Water Standards. This is especially important where water quality could be impacted by contaminants such as nitrates and E. coli. Drinking water testing is covered by our Routine Water profile and we have a number of different kits with instructions for different types of drinking water, such as bore water, rainwater and surface water. We are an IANZ accredited Drinking Water laboratory allowing us to perform testing to meet the requirements of the Drinking Water Quality Assurance Rules 2022.

■ SWIMMING AND SPA POOL WATER TESTING

Contamination of swimming pools or spas occurs as a result of various faecal or oral discharges and skin shedding, and usually results in the accumulation of micro-organisms, some of which are harmful to humans. For a more complete listing of our water testing options and the associated test details, simply contact us and we will be happy to help you decide what test is best for your particular needs.

■ FOOD SAFETY WATER TESTING

Testing self-supply water for its suitability for food processing is required for a range of operations, such as washing, blending, cleaning, ice making, steam production and product transportation. We are able to provide sampling kits for this testing, which is typically for E.Coli and Turbidity.

■ GLOBAL GAP WATER TESTING

To assist growers in meeting Global GAP requirements, Hill Labs offers a convenient sampling kit and laboratory analysis for the presence of E. coli and Faecal Coliforms in water.

We've been delivering analytical testing services to Aotearoa New Zealand for a long time, since 1984 in fact. Today, we are proud to be a trusted service provider to customers across a broad range of industry sectors.
